Your machine knowledge. Connected and on hand.

RivetTrail brings together what sits in ERP, MES, maintenance, Excel lists and manuals. **One linked knowledge base for all machines, for every manufacturer. Every entry with its source.**

The machine is down. Where do the answers come from?

	Today	With RivetTrail
Which part is installed?	ERP, network drive, service report	**In the knowledge base, with its source. Discrepancies are flagged.**
What was changed last?	Shift log, emails, asking around	**History with date and supporting record.**
Who knows this machine?	Ringing round	**A named contact for every machine.**
What depends on it?	The foreman knows	**Upstream and downstream machines, backup machine, utilities.**

Shorter downtime

Troubleshooting starts straight away, not with a hunt for documents.

Reliable data

Duplicates and conflicts are caught before they cause damage.

Knowledge stays

What colleagues carry in their heads is in the knowledge base. Even after they retire.

67% of industrial companies have unplanned downtime every month.[1]

13.4 million people in Germany's workforce will reach retirement age by 2039.[2]

[1] ABB / Sapio Research, 07/2023 · [2] Destatis, 08/2025

How it works: overleaf

New machine? Documents in, checked, done.

Nobody has to key in serial numbers by hand. And duplicate or conflicting entries are caught before they reach the knowledge base.

01	**Upload documents** Nameplate photo, reports, lists.	e.g. `Nameplate_CNC.jpg`
02	**Details are recognised** Manufacturer, type, serial number, control system. Every entry with its source.	`DEMO-1850-0317` from nameplate, line 3
03	**Checked automatically** Does the machine already exist? Do the details match the knowledge base?	**This machine already exists.** Add documents to CNC-003.
04	**Approve** Optionally, a second person signs off. Only then is the machine in the knowledge base.	Requested by A. Weber, approved by T. Berger

Quality assurance built in

No duplicates

If the machine already exists, you are told.

No silent errors

Conflicts are flagged, not overwritten.

Fully traceable

Every entry with its source, every change with person and date.

Start with your 10 most critical machines.

Built from the files you already have. No IT project, no system access.

We are looking for pilot sites.
